Day 4-2

Assignment:

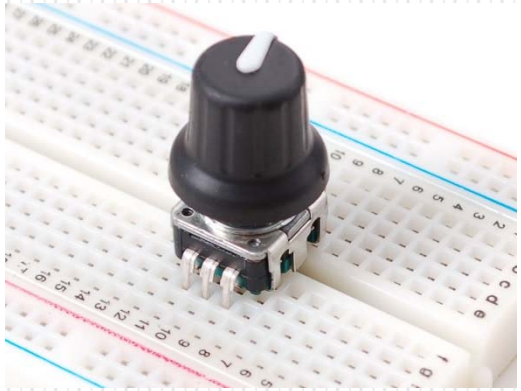
- Homework 03, Due Today
- Labs 04-07 is available now

Today's Topics:

- LED Matrix
- Range Finder
- Joysticks, Encoders
- Accelerometers, Gyros

03-3 Rotary Encoders - eQEP

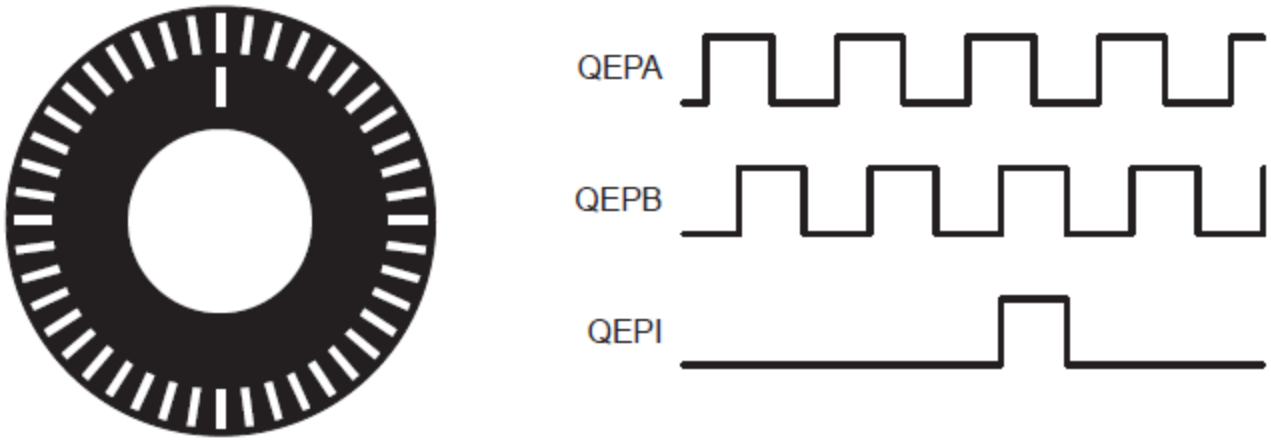
Measuring Rotation



Rotary Encoders

- Rotary encoder measure rotation by using two switches that open and close 90° out of phase with each other
- They have two inputs, **A** and **B**

Figure 15-130. Optical Encoder Disk



Reading the Encoder

- We could hook **A** and **B** to GPIO pins and read them ourselves
- The Bone has hardware for reading encoders called the Enhanced Quadrature Encoder Pulse (eQEP) Module
- See section 15.4 of the TRM

eQEP

- Let's use eQEP 2
- Derek Molloy's table show they appear on pins P8_11 and 12

Enable eQEP

```
bone$ ls /lib/firmware/ | grep -i qep
PyBBIO-eqep0-00A0.dtbo
PyBBIO-eqep1-00A0.dtbo
PyBBIO-eqep2-00A0.dtbo
PyBBIO-eqep2b-00A0.dtbo
bone$ export SLOTS=/sys/devices/bone_capemgr.*/slots

bone$ echo PyBBIO-eqep2b > $SLOTS
```

- eQEP is now enabled

Read eQEP

```
bone$ cd /sys/devices/ocp.*/48304000.epwmss
bone$ ls -F
48304100.ecap/  48304200.ehrpwm/  modalias  subsystem@
48304180.eqep/  driver@           power/    uevent
bone$ cd 48304180.eqep/
bone$ ls -F
driver@  enabled  modalias  mode  period
position  power/  subsystem@  uevent
bone$ cat position
-50
```

- Turn encoder

```
bone$ cat position
-36
```

Read from JavaScript (examples/eQEP)

```
#!/usr/bin/env node
// This uses the eQEP hardware to read a rotary encoder
// echo PyBBIO-eqep2b > $SLOTS

var b = require('bonescript'),
    fs = require('fs');

var eQEP0 = "/sys/devices/ocp.3/48300000.epwmss/48300180.eqep",
    eQEP1 = "/sys/devices/ocp.3/48302000.epwmss/48302180.eqep",
    eQEP2 = "/sys/devices/ocp.3/48304000.epwmss/48304180.eqep",
    eQEP = eQEP2;

var oldData,         // pervious data read
    period = 100;    // in ms
```

```
bone$ ls -F
driver@  enabled  modalias  mode  period
position  power/  subsystem@  uevent
```

Read from JavaScript (2)

```
   period = 100;    // in ms
// Set the eEQP period, convert to ns.
fs.writeFile(eQEP+'/period', period*1000000,
   function(err) {
       if (err) throw err;
       console.log('Period updated to ' +
                                 period*1000000);
})

// Enable
fs.writeFile(eQEP+'/enabled', 1,
    function(err) {
       if (err) throw err;
       console.log('Enabled');
})
```

Read from JavaScript (3)

```
setInterval(readEncoder, period); // Check state every 100 ms

function readEncoder(x) {
    fs.readFile(eQEP + '/position',
       {encoding: 'utf8'},
       printValue);
}
function printValue(err, data) {
    if (err) throw err;
    if (oldData !== data) {
       console.log('position: %d, speed:‘,
                    data, oldData-data);
           oldData = data;
       }
}
```
